

How to install the PWS_Dashboard template for

Ambient - Cumulus - Meteobridge - Meteohub - WeatherCat - WeatherDisplay - WeatherLink - WeatherUnderground - Weewx - WifiLogger - WL.com - WSWIN a.o.

In all documents we use the following example-URL's

- for the name of your site, we will use **www.yoursite.com/**

- for the name of the folder: **pwsWD / + the name of the script if needed**

Move the template to your website

1. download the latest version of PWS_Dashboard from <https://pwsdashboard.com/>
2. Use your providers cPanel to upload the zip and unzip it in your home-folder
or
unzip the download and use your FTP program to upload the **complete** folder to your website.
3. Now enter in your browser **http://www.yoursite.com/pwsWD/**
4. and the setup program will start,

Adapt the template to your situation

PWS_Dashboard template setup release 2012_Its

[Back to the main page](#)

after entering the settings

Enter your password for the "Setup Screen" below

first time 12345

Login

Info: Your current PHP version is : 7.4.2

PHP 7+ is advised for this template but it will run also with PHP 5.6.3 or higher

A small box will appear (like the white part on the left) and it will ask for your password.

You type 12345 (first time only) and click the "Login" button.

Next, the setup script will start asking you multiple questions.

Start	Location	Data	Units	Devices	Tiles	Api&Keys	Other	Save your settings
Welcome by EasyweatherSetup The "settings" to adapt the dashboard to your situation are grouped into 8 pages. Click on a grey button above to go to the another set of questions. When you are finished, or if want to stop for a while, save your answers by clicking at the green button at the top right.								
Protect your settings with a password								
password1	I use a string you remember easily, but not to short and not 12345							12345
password2	blue values for unanswered questions							Yes, we do.
Station/owner details, keep the descriptions short								
stationname	The name to be used for your station							xyz-weatherstation
stationlocation	A relative short name for the area/region your weather-station is in.							A city in Belgium
The contact pop-up								
contact_show	Do we want to use it							Do not use this
email	The email address for the contact pop-up							someone@dot.com
twittername	Do you have a twitter account?							Do not use this
twitter	Your @twitter account							pwsweather
facebookuser	Do you want to show a link to your facebook account ?							Do not use this
facebook	Your facebook account-name							pwsweather
Choose the default language to display and use.								
defaultlanguage	Template language to be used as default							English (United Kingdom)
lang_admin	Are visitors allowed to change the template language?							A visitor may change the language used

Carefully check all typing of api-keys a.s.o. as scripts need the exact correct values.

Important

Change the password to an easy string you can remember, do not continue to use 12345.

Others could change your settings then also.

Step by Step

Now you enter all needed values. These questions are grouped and presented in 8 tabs.

Before leaving the setup program you should press

the "Save your configuration" button in the green area at the top.

You will then be redirected to the password/sign-on page.

If you are not finished you can go back into the setup questions.

Or you can click the link to go to your adapted template and check if all looks OK .

Important

It can take more than a few minutes before all your new data is loaded. Most external data is cached to lower the load and shorten response-times. But after 5 to 60 (forecasts) minutes all adaptations should be visible.
